Education

Georgia Institute of Technology

Atlanta, GA

May 2026

- Bachelor's in Science | Major: Computer Science | Concentrations: AI, Computational Media
- GPA: 3.7/4.0 | Graduating with Highest Honors, Dean's List 2023-2025, Eta Kappa Nu Scholar
- Affiliations: AI@GT, Data Science @ GT, GT Animation Club, VGDev Club

Skills

Languages: Python, Java, JavaScript, C, C#, C++, Typescript, SQL, R, HTML/CSS

ML Tools: Tensorflow, Pytorch, Matplotlib, Pandas, Numpy, OpenCV, scikit-learn, LangChain

Frameworks: React, Next.js, Angular, Figma, Node.js, PostgreSQL, MongoDB, AWS, Firebase, RESTful APIs

Dev Tools: Git, Docker, Linux, Jira, JUnit, Selenium

Experience

GT Fung Research Group

Aug 2023 – May 2026

Undergraduate Research Assistant

Atlanta, GA

- Authored thesis for particle swarm optimization-based graph neural network crystal structure prediction achieving 90%+ accuracy with PyTorch Geometric, ASE, and Pyswarms
- Contributed to 3 GNN lab packages and engineered data pipeline processing 10,000+ crystal structures from Materials Project database, discovering 100+ novel ground-state configurations through automated DFT validation

NASA

Jun 2024 – Aug 2024

Systems & Infrastructure Intern

Kennedy Space Center, FL

- Engineered 4 production data visualization dashboards for Launch Control Center monitoring 100,000+ security events, implementing real-time alert systems with SQL queries and automated data aggregation pipelines
- Built automated data preprocessing pipeline for security event classification, achieving 20% reduction in false positive alerts through threshold optimization and time-series analysis techniques
- Drafted 20+ PO&AMs for 3 NE-XC sector teams with cross-collaboration, ensuring NIST/FISMA compliance for SSP and SCP documentation.

Inchtone

Apr 2023 – Aug 2023

Software Engineer Intern (Team Lead)

- Led intern team by coordinating project deadlines for end-to-end web scraping to Apollo.io database pipeline with Selenium, REST APIs and Pandas, improving lead data acquisition efficiency by 40% across sales workflow
- Engineered database to CRM automation pipeline with REST APIs and Pandas for large-scale data transformation and ingestion, reducing data processing time by 25%

Projects

Blender Extension Development | [link](#) | Python, C++

- Designed and shipped 2 Blender addons using Python and Blender API, enhancing modeling and animation workflow efficiency by 20% for 6,000+ active users with automated IK/FK snapping and topology based selection tools

DARWIN: Agentic Evolutionary GPT Training Framework | [Github](#) | [arXiv](#) | Python, LLMs, Docker, Claude API

- Designed Docker containerized agentic evolutionary AI CI/CD framework for self-improving agents optimizing via genetic algorithm architecture, improving CoT response quality by 30% and increasing architecture depth by 100%

Mandelbrotian Volatility Options Trading Model | [Github](#) | [Quantconnect](#) | QuantConnect, Python, Scipy, Scikit-learn

- Engineered fractal regime classification options strategy with Hurst exponents (DFA), Hill tail-index, and multifractal spectral width achieving 55+% CAGR and 1.18 Sharpe across 105 MAG7 tech equity trades over 5 years ('20-'25)

Adversarial Machine Learning Based Social Media | Postgres, React, MongoDB, Next.js, Node.js, Angular, AWS, Figma

- Developed an ML-based image poisoning-focused social media site for artists with AWS, Postgres, and Node.js ensuring 100% safety from web crawling and backend horizontal scalability for up to 100,000+ users
